

Your Name: Jordan Gould

Your Group Number: 11

Name of the Organization/Business: Trinity Church

URL of the Project Website: <https://trinitythomasville.church/>

Date Submitted: 11/02/2025

PART 1

1. List items (content, navigation elements, visual cues, calls to action, images, etc.) you should remember to include on the homepage (just keep listing, you can organize later):

- I. Church logo and name
- II. Navigation bar (Home, About, Visit Us, Ministries, Sermons, Contact)
- III. Hero image of the church or congregation
- IV. Welcome message for new visitors
- V. Clear “Plan Your Visit” button (Call to Action)
- VI. Service times and days displayed clearly (e.g., “Sunday Service – 10:00 AM”)
- VII. Map or link to directions
- VIII. Contact information (address, phone number, email)
- IX. Social media links (Facebook, YouTube, Instagram)
- X. Upcoming events or community highlights
- XI. Quick link to “Watch Online” or “Livestream” service
- XII. Footer with copyright, additional links, and accessibility options

2. In Assignment 4, in addition to creating a wireframe for the homepage, you will make wireframes for at least 3 pages a target user will see as they complete one main user task. In this activity, address the following questions:
What main user task will you be concentrating on your wireframes?

Primary user you are assigned to: New comers

Main task: Finding service days and times and being able to locate the church.

b. Briefly describe each page you will create wireframes for.

What step will this page/screen
represent in the task flow?

Briefly describe page/screen or
items to include.

Page 1: Homepage (Welcome): Wireframe of homepage that introduces the church. Include navigation bar, welcome message, service times, and a “Plan Your Visit” button. The homepage should have a visible section showing “Next Service” details and a link to directions.

Page 2: Visit Us page: Wireframe of “Visit Us” page dedicated to newcomers. Include a map with directions, parking information, and church address. Add a section describing what to expect during a first visit, dress code, and family-friendly info. Include a “Get Directions” button linked to Google Maps.

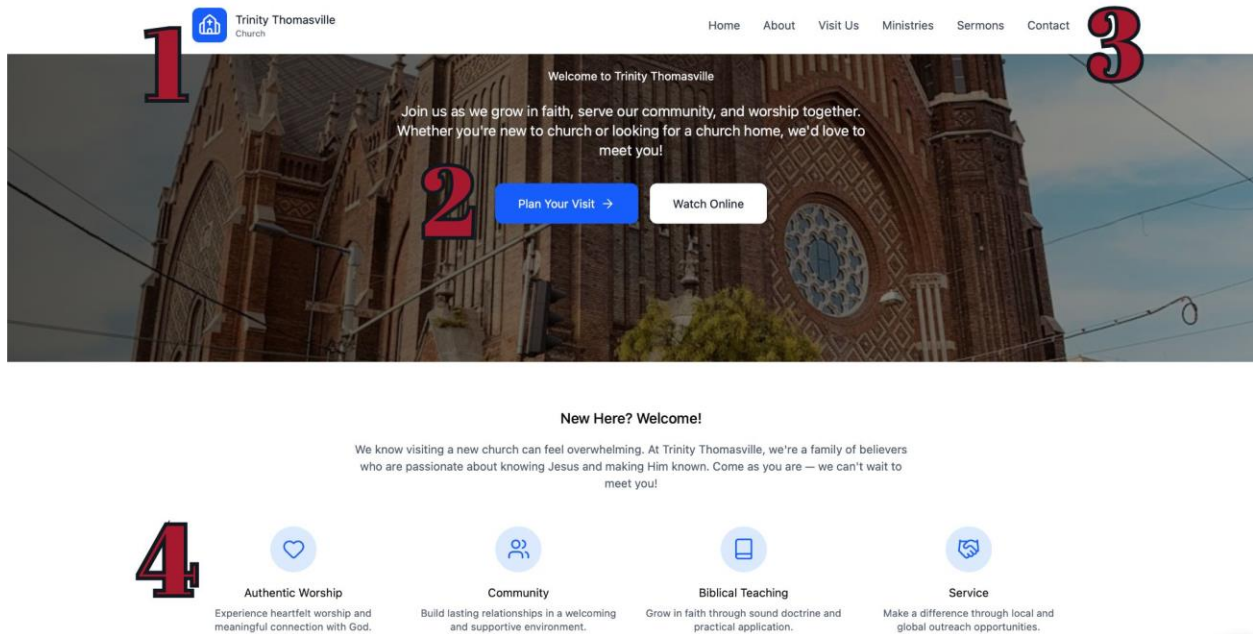

Page 3: Service time/Upcoming event page: Wireframe of page listing all service times, days, and special events. Include a simple calendar or list format and add a “Join Us This Sunday” button. Also, display livestream info and contact details for questions.

PART 2

Instructions: This is a brainstorming session, so don’t be worried about being perfect. The idea is to get started thinking about what you need for

Assign. #4.

Sketch out your ideas for your homepage as a wireframe using Figma, Visio, Balsamiq, or one of the other prototyping tools listed in the IA Tools

1. Church Logo & Name

In the upper-left corner of the sticky header is the Trinity Thomasville Church logo, which consists of a blue church icon with the church name. Clicking on the icon takes you back to the homepage. This placement adheres to user-expected web design principles, offers instant visual legitimacy, and strengthens the church's brand identity. As consumers navigate the page, the logo stays in view, ensuring consistent brand awareness and a recognizable "home" button. In addition to ensuring recognition on all devices, the icon and text combination helps to establish trust with first-time guests who could be assessing how professional and friendly this church feels.

2. Dual Call-to-Action Buttons in Hero Section ("Plan Your Visit" & "Watch Online")

Two well-positioned, visually distinct buttons in the hero area cater to the two main user journeys of online attendees and in-person guests. In order to help newcomers who are anxious about their first visit, the main blue "Plan Your Visit" button employs action-oriented text and an arrow icon to direct them toward realistic next steps (directions, service times, and what to expect). By removing obstacles to initial interaction, the secondary white "Watch Online" button

recognizes that many visitors would rather experience the church virtually before deciding to visit in person. Whether customers are ready to visit right now or would rather watch from a distance, our dual-path strategy meets them where they are in their decision-making process to optimize conversion.

3. Top Navigation Bar with Six Key Links

Home, About, Visit Us, Ministries, Sermons, and Contact are the main content categories of the website, and they are all easily accessible through the horizontal navigation menu. A fluid single-page experience is produced by each link's use of hover effects to provide visual feedback and its smooth scroll to the relevant part. All options are shown vertically when the navigation collapses into a hamburger menu on mobile devices, making it accessible on all screen sizes. This navigation layout follows potential visitors' natural information-seeking path, which includes reading about the church (About), scheduling a visit (Visit Us), looking into opportunities for involvement (Ministries), experiencing the teaching (Sermons), and contacting the church (Contact). By keeping these navigation alternatives available at all times, the sticky header behavior lowers user annoyance and abandonment.

4. Welcome Section with Four Core Values Display (Authentic Worship, Community, Biblical Teaching, Service)

The "New Here? Welcome!" section uses four visual value propositions presented in a grid arrangement together with kind, comforting language to deliberately handle first-time visitor fear. With a bold title and a brief description underneath, each value is symbolized by a colored icon in a circular container (heart for authentic worship, users for community, book for biblical teaching, and handshake for service). This arrangement achieves several important goals: it conveys the church's priorities and culture right away, assisting guests in determining whether this community meets their spiritual needs; it lessens the cognitive strain of reading long paragraphs by presenting important information in digestible, bite-sized chunks; and it creates an emotional bond with well-chosen language like "Come as you are."
